TO THE DEALER:

Assembly and proper installation of this product is the responsibility of the Woods® dealer. Read manual instructions and safety rules. Make sure all items on the Dealer’s Pre-Delivery and Delivery Check Lists in the Operator’s Manual are completed before releasing equipment to the owner.

The dealer must complete the online Product Registration form at the Woods Dealer Website which certifies that all Dealer Check List items have been completed. Dealers can register all Woods product at dealer.WoodsEquipment.com under Product Registration.

Failure to register the product does not diminish customer’s warranty rights.

TO THE OWNER:

Read this manual before operating your Woods equipment. The information presented will prepare you to do a better and safer job. Keep this manual handy for ready reference. Require all operators to read this manual carefully and become acquainted with all adjustment and operating procedures before attempting to operate. Replacement manuals can be obtained from your dealer. To locate your nearest dealer, check the Dealer Locator at www.WoodsEquipment.com, or in the United States and Canada call 1-800-319-6637.

The equipment you have purchased has been carefully engineered and manufactured to provide dependable and satisfactory use. Like all mechanical products, it will require cleaning and upkeep. Lubricate the unit as specified. Observe all safety information in this manual and safety decals on the equipment.

For service, your authorized Woods dealer has trained mechanics, genuine Woods service parts, and the necessary tools and equipment to handle all your needs.

Use only genuine Woods service parts. Substitute parts will void the warranty and may not meet standards required for safe and satisfactory operation. Record the model number and serial number of your equipment in the spaces provided:

Model: _______________________________ Date of Purchase: _____________________
Serial Number: (see Safety Decal section for location) ____________________________________

Provide this information to your dealer to obtain correct repair parts.

Throughout this manual, the term NOTICE is used to indicate that failure to observe can cause damage to equipment. The terms CAUTION, WARNING, and DANGER are used in conjunction with the Safety-Alert Symbol (a triangle with an exclamation mark) to indicate the degree of hazard for items of personal safety.

This is the safety alert symbol. It is used to alert you to potential physical injury hazards. Obey all safety messages that follow this symbol to avoid possible injury or death.

![DANGER]
Indicates a hazardous situation that, if not avoided, will result in death or serious injury.

![WARNING]
Indicates a hazardous situation that, if not avoided, could result in death or serious injury.

![CAUTION]
Indicates a hazardous situation that, if not avoided, could result in minor or moderate injury.

![IMPORTANT or NOTICE]
NOTE
Is used to address practices not related to physical injury.

Indicates helpful information.

GENERAL INFORMATION

The purpose of this manual is to assist you in operating and maintaining your attachment. Read it carefully. It furnishes information and instructions that will help you achieve years of dependable performance. These instructions have been compiled from extensive field experience and engineering data. Some information may be general in nature due to unknown and varying operating conditions. However, through experience and these instructions, you should be able to develop procedures suitable to your particular situation.

The illustrations and data used in this manual were current at the time of printing but, due to possible inline production changes, your machine may vary slightly in detail. We reserve the right to redesign and change the machines as may be necessary without notification.

**WARNING**

- Some illustrations in this manual show the cold planer with safety shields removed to provide a better view. The cold planer should never be operated with any safety shielding removed.

Throughout this manual, references are made to right and left direction. These are determined by standing behind the equipment facing the direction of forward travel.
SAFETY RULES

ATTENTION! BECOME ALERT! YOUR SAFETY IS INVOLVED!

Safety is a primary concern in the design and manufacture of our products. Unfortunately, our efforts to provide safe equipment can be wiped out by an operator’s single careless act.

In addition to the design and configuration of equipment, hazard control and accident prevention are dependent upon the awareness, concern, judgement, and proper training of personnel involved in the operation, transport, maintenance and storage of equipment.

It has been said “The best safety device is an informed, careful operator.” We ask you to be that kind of operator.

**INSTALLATION**
- Hydraulics must be connected as instructed in this manual. Do not substitute parts, modify, or connect in any other way.
- After connecting hoses, check that all control lever positions function as instructed in the Operator’s Manual. Do not put into service until control lever and equipment movements are correct.

**TRAINING**
- Safety instructions are important! Read all attachment and power unit manuals; follow all safety rules and safety decal information. (Replacement manuals and safety decals are available from your dealer. To locate your nearest dealer, check the Dealer Locator at www.WoodsEquipment.com, or in the United States and Canada call 1-800-848-3447.) Failure to follow instructions or safety rules can result in serious injury or death.
- If you do not understand any part of this manual and need assistance, see your dealer.
- Know your controls and how to stop engine and attachment quickly in an emergency.
- Operators must be instructed in and be capable of the safe operation of the equipment, its attachments, and all controls. Do not allow anyone to operate this equipment without proper instructions.
- Keep hands and body away from pressurized lines. Use paper or cardboard, not hands or other body parts to check for leaks. Wear safety goggles. Hydraulic fluid under pressure can easily penetrate skin and will cause serious injury or death.
- Make sure that all operating and service personnel know that if hydraulic fluid penetrates skin, it must be surgically removed as soon as possible by a doctor familiar with this form of injury or gangrene, serious injury, or death will result. CONTACT A PHYSICIAN IMMEDIATELY IF FLUID ENTERS SKIN OR EYES. DO NOT DELAY.
- Never allow children or untrained persons to operate equipment.

**PREPARATION**
- Check that all hardware is properly installed. Always tighten to torque chart specifications unless instructed otherwise in this manual.
- Counterweight ballast may be required for machine stability. Check your power unit manual or contact your dealer.
- Air in hydraulic systems can cause erratic operation and allows loads or equipment components to drop unexpectedly. When connecting equipment or hoses or performing any hydraulic maintenance, purge any air in hydraulic system by operating all hydraulic functions several times. Do this before putting into service or allowing anyone to approach the equipment.
- After connecting hoses, check that all control lever positions function as instructed in the Operator’s Manual. Do not put into service until control lever and equipment movements are correct.
- Protective hose sleeves must cover all hydraulic hoses within 20 inches of the operator and be secured onto metal hose fittings. Replace hoses or sleeves if damaged or if protective sleeve cannot be properly positioned or secured.
- Make sure all hydraulic hoses, fittings, and valves are in good condition and not leaking before starting power unit or using equipment. Check and route hoses carefully to prevent damage. Hoses must not be twisted, bent sharply, kinked, frayed, pinched, or come into contact with any moving parts. Operate moveable components through full operational range to check clearances. Replace any damaged hoses immediately.
- Your dealer can supply original equipment hydraulic accessories and repair parts. Substitute parts may not meet original equipment specifications and may be dangerous.
- Always wear relatively tight and belted clothing to avoid getting caught in moving parts. Wear sturdy, rough-soled work shoes and protective equipment for eyes, hair, hands, hearing, and head; and respirator or filter mask where appropriate.
SAFETY RULES
ATTENTION! BECOME ALERT! YOUR SAFETY IS INVOLVED!

- Be sure attachment is properly secured, adjusted, and in good operating condition. Coupler lockpins must be fully extended and properly engaged into attachment retaining slots.
- Power unit must be equipped with ROPS and seat belt/operator restraint. Keep seat belt/operator restraint securely fastened/engaged. Falling off power unit can result in death from being run over or crushed. Keep ROPS systems in place at all times.
- Make sure all safety decals are installed. Replace if damaged. (See Safety Decals section for location.)
- Make sure shields and guards are properly installed and in good condition. Replace if damaged.
- Inspect and clear area of stones, branches, or other hard objects that might be thrown, causing injury or damage.

OPERATION

- Improper operation can cause the machine to tip or roll over and cause injury or death.
  - Keep power unit lift arms and attachment as low as possible.
  - Do not travel or turn with power unit lift arms and attachment raised.
  - Turn only on level ground.
  - Go up and down slopes, not across them.
  - Keep the heavy end of the machine uphill.
  - Do not overload the machine.
- Never use attachment to carry loads that exceed the rated operating capacity or other specifications of the power unit. Check your power unit manual or see your dealer for rated operating capacity. Exceeding this capacity can cause machine to tip, roll over, or present other hazards that can cause injury or death.
- Do not allow bystanders in the area when operating, attaching, removing, assembling, or servicing equipment.
- Contact with high voltage, overhead power lines, underground cables, gas lines, and other hazards can cause serious injury or death from electrocution, explosion, or fire.
- Keep bystanders away from equipment.
- Never direct discharge toward people, animals, or property.

- Do not operate or transport equipment while under the influence of alcohol or drugs.
- Operate only in daylight or good artificial light.
- Keep hands, feet, hair, and clothing away from equipment while engine is running. Stay clear of all moving parts.
- Always comply with all state and local lighting and marking requirements.
- Do not allow riders. Do not lift or carry anybody on the power unit or attachments.
- Always sit in power unit seat when operating controls or starting engine. Securely fasten seat belt/operator restraint, place transmission in park or neutral, engage brake and ensure all other controls are disengaged before starting power unit engine.
- Look down and to the rear and make sure area is clear before operating in reverse.
- Use extreme care when working close to fences, ditches, other obstructions, or on hillsides.
- Do not operate or transport on steep slopes.
- Do not stop, start, or change directions suddenly on slopes.
- Use extreme care and reduce ground speed on slopes and rough terrain.
- Watch for hidden hazards on the terrain during operation.
- Stop power unit and implement immediately upon striking an obstruction. Dismount power unit, using proper procedure. Inspect and repair any damage before resuming operation.
- Leak down or failure of mechanical or hydraulic system can cause equipment to drop.
- Before making any adjustments on attachment, stop engine and engage parking brake. Never adjust or work on attachment while the power unit or attachment is running.
- Before leaving operator's seat, lower lift arms and put attachment on the ground. Engage brake, stop engine, remove key, and remove seat belt.

MAINTENANCE

- Before leaving operator's seat, lower lift arms and put attachment on the ground. Engage brake, stop engine, remove key, and remove seat belt.
- NEVER GO UNDERNEATH EQUIPMENT. Never place any part of the body underneath equipment.
or between moveable parts even when the engine has been turned off. Hydraulic system leak-down, hydraulic system failures, mechanical failures, or movement of control levers can cause equipment to drop or rotate unexpectedly and cause severe injury or death.

- Service work does not require going underneath.
- Read Operator's Manual for service instructions or have service performed by a qualified dealer.

Do not modify or alter or permit anyone else to modify or alter the equipment or any of its components in any way.

Your dealer can supply original equipment hydraulic accessories and repair parts. Substitute parts may not meet original equipment specifications and may be dangerous.

When removing front wheel pins, be sure to support the front of the depth skid to prevent hands or feet from being crushed.

Always wear relatively tight and belted clothing to avoid getting caught in moving parts. Wear sturdy, rough-soled work shoes and protective equipment for eyes, hair, hands, hearing, and head; and respirator or filter mask where appropriate.

Do not allow bystanders in the area when operating, attaching, removing, assembling, or servicing equipment.

Be sure attachment is properly secured, adjusted, and in good operating condition. Coupler lockpins must be fully extended and properly engaged into attachment retaining slots.

Never perform service or maintenance with engine running.

Keep all persons away from operator control area while performing adjustments, service, or maintenance.

Tighten all bolts, nuts, and screws to torque chart specifications. Check that all cotter pins are installed securely to ensure equipment is in a safe condition before putting unit into service.

Make sure all safety decals are installed. Replace if damaged. (See Safety Decals section for location.)

Make sure shields and guards are properly installed and in good condition. Replace if damaged.

Do not disconnect hydraulic lines until all system pressure is relieved. Lower unit to ground, stop engine, and operate all hydraulic control levers.

Leak down or failure of mechanical or hydraulic system can cause equipment to drop.

STORAGE

Follow manual instructions for storage.

Keep children and bystanders away from storage area.
SAFETY & INSTRUCTIONAL DECALS

ATTENTION! BECOME ALERT! YOUR SAFETY IS INVOLVED!
Replace Immediately If Damaged!

WARNING
ROTATING CUTTER
Keep clear during operation.

WARNING
FLYING OBJECT HAZARD
Keep clear during operation.

WARNING
FLYING OBJECT HAZARD
Keep clear during operation.

WARNING
PINCH AREA
Keep clear during operation.

WARNING
HIGH-PRESSURE HYDRAULIC OIL LEAKS CAN PENETRATE SKIN RESULTING IN SERIOUS INJURY, GANGRENE OR DEATH.
- Check for leaks with cardboard; never use hand.
- Before loosening fittings: lower load, release pressure, and be sure oil is cool.
- Consult physician immediately if skin penetration occurs.

BE CAREFUL!

Use a clean, damp cloth to clean safety decals.
Avoid spraying too close to decals when using a pressure washer; high-pressure water can enter through very small scratches or under edges of decals causing them to peel or come off.

Replacement safety decals can be ordered free from your Woods dealer. To locate your nearest dealer, check the Dealer Locator at www.WoodsEquipment.com, or in the United States and Canada call 1-800-319-6637.
WARNING

FALLING OFF CAN RESULT IN BEING RUN OVER.
- Skid steer must have ROPS and seat belt/operator restraint. Keep seat belt/operator restraint securely fastened.
- Allow no riders.

RAISED EQUIPMENT CAN DROP AND CRUSH.
- Never go underneath raised equipment or raised Skid Steer lift arms, which can drop from hydraulic leak down, hydraulic system failures, movement of control levers or mechanical linkage failures.
- Service work does not require going underneath equipment. Read manual instructions.

FALLING OFF OR GOING UNDERNEATH EQUIPMENT CAN RESULT IN SERIOUS INJURY OR DEATH.

WARNING

TO AVOID SERIOUS INJURY OR DEATH:
- Read operator’s manual and power unit manual before operating, servicing, or repairing attachment. Follow all safety rules and instructions. (Manuals are available from dealer or, in the United States and Canada, call 1-800-790-0557.)
- Only operate from operator’s seat with seat belt/operator restraint securely fastened.
- Before leaving operator’s seat: follow power unit manual instructions, lower lift arms and attachment to ground, stop engine, remove key, engage brake, and remove seat belt/operator restraint.
- Allow no children or untrained persons to operate equipment.
SAFETY PRECAUTIONS

Accidents are preventable with your help.

■ Before operating this equipment, the following safety information should be read and understood. In addition, each individual working with the equipment should be familiar with the safety precautions.

Exercise extreme caution when hitching and removing the attachment, operating with other workers present, and servicing the unit.

Woods always makes operator safety a priority when designing machinery. Exposed moving parts are guarded whenever possible for safety. However, not all moving parts can be shielded in order to ensure proper operation. This operator’s manual and the safety decals on the machine provide important safety information and observed closely. If safety decals become difficult to read, replace them immediately (see “Safety Decals”).

MANDATORY SAFETY SHUTDOWN PROCEDURE

■ Failure to follow the procedures before cleaning, adjusting, lubricating, or servicing this unit could lead to serious injury or death.

BEFORE cleaning, adjusting, lubricating, or servicing this unit, ALWAYS follow the MANDATORY SAFETY SHUTDOWN PROCEDURE:

1. Move the skid steer loader propulsion control lever to the “neutral” position.
2. Shut off the attachment by shutting off the auxiliary hydraulic output.
3. Lower the loader lift arms completely and roll the attachment forward so it is securely resting on firm ground or the shop floor.
4. Engage the loader park brake.
5. Move the loader throttle to the slow idle position, shut the engine off, and remove the ignition key.
6. Keep the key with you at all times when working on the unit so no one can start the engine without your knowledge.

SETUP

■ Read the entire manual as well as the decals on the attachment (see safety section) before attempting any maintenance, service, repair or setup of the unit.

Although the Alitec Attachment is supplied fully assembled, some simple checks should be performed before operation begins.

SAFETY DECALS

The safety decals existing on the attachment should be clearly readable and always followed. The location and description of the decals is shown in the exploded diagram. Copies of the decals are shown in “Safety Decals” section.

LUBRICATION

All attachment wheels as well as the sideshift bars and pivot points shown in the exploded diagram should be greased. All bearings should be greased with a high temperature bearing grease, EP-2 or equivalent.

DRUM ASSEMBLY

For proper operation, all picks or teeth must be installed in all holders.

HOSES / FITTINGS

Hydraulic fittings are used to connect all attachment hoses. All fittings should be tight and free of hydraulic leaks. Hoses must be free of crimps or cuts that might result in leakage. Check your attachment before operation to make sure all hose routing are kink-free and allow for maximum movement of all sideshift, lift/lower, and/or swing motion required during normal operation.

RETAINING RINGS

The sideshift cylinder as mounted for operation is retained with three (3) one inch external retaining rings; (6) in each depth cylinder and two (2) on the tilt cylinder.

IMPORTANT

■ The planer should not be operated at any time when any of these rings are damaged or missing.

The planer attachment is hydraulic powered and intended for use in milling asphalt or concrete surfaces. The performance of the attachment can vary greatly.
depending upon how it is used and operated. Therefore, the recommended operating procedures contained within this manual should be followed at all times for maximum productivity.

As noted in the Alitec literature, the attachment requires a minimum hydraulic supply of 25 gallons per minute (90 liters per minute) at 2000psi.

**IMPORTANT**

- Insufficient hydraulic power will result in poor performance.

In attaching the planer to the skid steer, ensure that all hydraulic hoses are coupled securely to the quick couplers - 3 hoses (motor pressure, return, and casedrain).

**IMPORTANT**

- Casedrain must be attached and hose pressure must not exceed 15psi. Motor seal failure will occur if the casedrain is not attached, if the hose is crimped, or if hose pressure is excessive. All hoses should be free of kinks, cuts, or abrasions for safe operation.

When using a quick attachment hookup to the skid steer, the locking pins on the loader arms should always be engaged and secured.

**WARNING**

- Never open the hinge drum access cover used for drum access during operation. The two klik pins (see exploded diagram) should be checked to make sure they are securely fastened before beginning operation.

When engaging the hydraulic power to the attachment, the drum should not be in contact with the surface to be planed. Free rotation is required to prevent excess pressure spikes upon startup. As is always the case, the operator must always be seated in the host vehicle upon startup.

Engage the hydraulic power and lower the planer slowly. Actuate the bucket cylinder function for rollout until the planer wheels come in contact with the planing surface. Then set to desired depth. Before advancing the host vehicle, allow the planer to operate until it reaches the desired planing depth.

**IMPORTANT**

- For proper operation, the majority of the weight of the front of the skid steer should be placed upon the planer with the loader arms fully lowered. The transfer of skidsteer weight to the attachment results in smoother, faster planing. The loader arms should never be placed in the float condition; because, excessive vibration will result.

With the rear gauge wheel(s) set for acceptable planing depth, the bucket function should be used for lifting or lowering during operation.

The drum rotation will stall when the load on the planer is too high. This is most likely the result of excessive ground speed. The hydraulic reliefs on board the skid steer are designed to prevent damage to the hydraulic system by diverting all flow from the planer motor. If this occurs, stop or slightly reverse the forward drive of the skid steer and slowly move forward.

**IMPORTANT**

- The bucket cylinder function should never be used to stop operation due to the existence of secondary reliefs on some skid steer bucket cylinders.

For maximum productivity, the planer should always be operated at full engine throttle to ensure that full hydraulic horsepower is available to the cutting drum.

**Side Shift Operation**

The two sideshift hoses, when connected to the auxiliary hydraulics of the skid steer, provide hydraulic power necessary for sideshift operation. By actuating the auxiliary circuit, the planer will shift on sideshift rod.

**Hydraulic Tilt**

To operate the hydraulic tilt, set the options toggle switch located at the operator’s control panel to ‘tilt’, and actuate the auxiliary circuit.

**Hydraulic Depth Control**

To operate the hydraulic depth control, set the options toggle switch to ‘depth’ and actuate the auxiliary circuit to achieve the desired depth.

**IMPORTANT**

- All function adjustments must be done with high flow hydraulics engaged.

**Transporting**

Roll the skid steer arms fully back and raise the planer 12 to 15” off the ground. Avoid excessive ground speed and sudden maneuvers.

**IMPORTANT**

- When transporting attachment make sure the drum does not contact the ground as this may cause the drum to turn resulting in damage to the motor.
**MAINTENANCE**

Proper maintenance of the attachment will result in longer life and the most productive and cost effective operation. There are two basic categories of maintenance required, pick/holder replacement and component lubrication. For proper operation, the picks should be checked every four (4) hours and lubricated daily to ensure that they can freely rotate in their holders.

**Pick/Holder Replacement**

As regular use takes place, normal wear of the carbide picks will occur with the outer most picks wearing first. The pick tool included with the planer should be used to remove the picks from the cast holders. In the event the pick tool is not available, any hardened punch or tool allowing access to the bottom of the holders can be used.

**IMPORTANT**
- Welder must be grounded directly to drum during pick holder replacement or SEVERE BEARING DAMAGE WILL RESULT.

**WARNING**
- Never drive the pick in by striking it directly on the end as this can cause the pick to chip and cause injury or create small stress fractures in the pick resulting in premature wear.

A length of pipe with a 3/4-1 inch inside diameter can be placed over the pick to protect it from a direct hit. Striking a small piece of wood placed on the pick to absorb the shock will prevent damage.

**WARNING**
- Always wear safety glasses when performing this operation. Hardened tools and picks can shatter causing injury.

The factory installed carbide pick chosen for use is a general purpose asphalt/concrete pick as the Cold Planer is designed for both asphalt and concrete planing applications. For replacement of multi-purpose picks always specify Alitec B1050S picks from your local dealer. If the planer is to be used specifically for concrete, a special concrete pick is available. Specify B1050C.

**IMPORTANT**
- To prevent the picks from seizing in the holders, the picks should be sprayed with diesel fuel at the end of each day. This will break down the asphalt build-up in the holders and prevent premature wear by allowing the picks to rotate in the holders. Excess diesel fuel should be caught in a collection pan and properly disposed.

**Lubrication**

Lubricate the grease points daily on all planer wheels as well as the drum bearings. All bearings should be greased with a high temperature bearing grease, EP-2 or equivalent.

The lubricant in the gear case of the planetary must be changed within the first 50 hours of operation. After that, the lubricant need only be changed once per year or every 1000 hours whichever occurs first.

**IMPORTANT**
- Type of lubricant should be 80-90W gear lube, with an EP (extreme pressure) rating of GL-5 minimum. Thirty-one (31) ounces is required for each change.

The lubricant can be changed by removing the drain plug located on the planetary gear box flange between the chassis and the drum. Rotate the drum until the plug is at its lowest position and remove the plug (it may be necessary to temporarily remove the drive motor to allow the drum to rotate). Allow lubricant to drain. Rotate drum until the drain hole is aligned with the inspection hole in the side of the chassis. Refill gear case with thirty-one (31) ounces EP-90 gear lubricant. Reinstall drain plug. Reinstall drive motor if it was removed.

**CLEANING**

**After Each Use**
- Remove large debris such as clumps of dirt, grass, crop residue, etc. from machine.
- Inspect machine and replace worn or damaged parts.
- Replace any safety decals that are missing or not readable.

**Periodically or Before Extended Storage**
- Clean large debris such as clumps of dirt, grass, crop residue, etc. from machine.
• Remove the remainder using a low-pressure water spray.
  1. Be careful when spraying near scratched or torn safety decals or near edges of decals as water spray can peel decal off surface.
  2. Be careful when spraying near chipped or scratched paint as water spray can lift paint.
  3. If a pressure washer is used, follow the advice of the pressure washer manufacturer.
• Inspect machine and replace worn or damaged parts.
• Sand down scratches and the edges of areas of missing paint and coat with Woods spray paint of matching color (purchase from your Woods dealer).
• Replace any safety decals that are missing or not readable (supplied free by your Woods dealer). See Safety Decals section for location drawing.
SERVICE

**WARNING**

- BEFORE SERVICING THIS UNIT, THE MANDATORY SAFETY SHUTDOWN PROCEDURE MUST BE COMPLETED. SEE "SAFETY" SECTION.

**DRUM REMOVAL**

1. With the attachment resting on a hard, flat surface, loosen the two set screws which fix the inner bearing race to the dead shaft.
2. Remove the dead shaft by removing the three bolts and nuts and pulling the dead shaft from the bearing and out of the planer head.
3. Remove the drive motor assembly by removing the two mounting bolts.
4. Remove the planetary mounting bolts.
5. Return to the skid steer operator's seat and check to see that all personnel are clear of the work area. Insert the key in the ignition and start the skid steer.
6. Sideshift the planer head slightly to the left (from the operator's viewpoint) to remove the planetary pilot from the planer head.
7. Raise the attachment with the host vehicle and the drum should remain on the floor.
8. Shut the engine off and remove the ignition key.

**WARNING**

- If drum does not remain on floor, lower the planer, shut the engine off, remove the ignition key and review steps 1 through 4. Do not attempt to dislodge the drum while the planer frame is in the raised position. Never place hands or any part of your body in, around, or under the drum as it may fall causing serious injury.

**PLANETARY REMOVAL**

1. Remove the drum from the attachment as described on the previous page.
2. Fully support the planetary with hoist and remove the planetary flange mounting nuts.
3. Slide the planetary from the drum with a hoist or similar device rated for more than 250 lbs. capacity (550 kg.).

**SIDESHIFT CYLINDER REMOVAL**

2. With the attachment on a level surface, remove all three one inch retaining rings from cylinder mounting pins.
3. Pull the cylinder evenly from both mounting pins. Remove the pin on the left-hand side and slide the rod end off the backplate.

**IMPORTANT**

- Remove any residual pressure in the cylinder by cycling the loader auxiliary control from side to side with the skid steer engine off.

**SIDESHIFT FRAME REMOVAL**

1. Disconnect the drive motor hoses.
2. Remove sideshift cylinder as described above.
3. Remove three backplate clamp nuts and bolts and main pivot retaining ring.
4. Attach the planer to the skid steer and slowly separate the sideshift frame from the chassis.
FULL WIDTH SIDESHIFT FRAME

Motor Removal

1. Remove and cap the motor hoses (1) shown in Figure 1.
2. Remove 1/4” cross bolt (2) as shown in Figure 2.
3. Remove four 3/8” motor bolts (3).
4. Remove the motor.

Bearing Removal

1. Perform steps 1 through 4 of Motor Removal.
2. Loosen the setscrews (1) as shown in Figure 3.
3. Slide shaft towards the motor side of the attach frame until the bearing side coupler clears the bearing.
4. Remove two 1/2” bolts (2).

ACME SCREW REPLACEMENT

1. Perform steps 1 through 4 of Motor Removal and steps 2 through 4 of Bearing Removal.
2. Remove 1/4” bolts (1) and (2) as shown in Figures 4 and 5.
3. Slide couplers off the acme screw.
4. Manually turn the acme screw to back it out of the bearing side of the sideshift frame.

**ACME NUT REPLACEMENT**

1. Perform steps 1 through 3 of Acme Screw Replacement.
2. Remove three 3/8” bolts (1) as shown in Figure 6.
3. Place the nut flange in a vice and use a pipe wrench to remove the nut from the flange.

**STORAGE**

**IMPORTANT**

- The cold planer is shipped with hoses. Unconnected hose ends should either be capped or have quick disconnect fittings installed to prevent loss of fluids or contamination.
- Keep children and bystanders away from storage area.
DEALER CHECK LISTS

PRE-DELIVERY CHECK LIST
(Dealer’s Responsibility)
Inspect the equipment thoroughly prior to delivery to ensure it is set up properly before delivering it to the customer.

The following check lists are a reminder of points to inspect. Check off each item as it is found satisfactory or after proper adjustment is made.

___ Check that all safety decals are installed and in good condition. Replace if damaged.
___ Check all bolts to be sure they are properly torqued.
___ Check that all cotter pins and safety pins are properly installed. Replace if damaged.
___ Check and grease all lubrication points.

DELIVERY CHECK LIST
(Dealer’s Responsibility)
___ Show customer how to make adjustments.
___ Point out the safety decals. Explain their meaning and the need to keep them in place and in good condition. Emphasize the increased safety hazards when instructions are not followed.
___ Instruct customer how to lubricate and explain the importance of lubrication.
___ Present Operator’s Manual and request that customer and all operators read it before operating equipment. Point out the manual safety rules, explain their meanings and emphasize the increased safety hazards that exist when safety rules are not followed.
## TROUBLESHOOTING CHART

<table>
<thead>
<tr>
<th>PROBLEM</th>
<th>POSSIBLE CAUSE</th>
<th>SOLUTION</th>
</tr>
</thead>
<tbody>
<tr>
<td>Planer loses power</td>
<td>Relief setting in auxiliary system lower than standard 2400 psi or Loader circuit pump or auxiliary pump failure</td>
<td>Remove/clean, or replace solenoid cartridge or replace O-rings. Check reliefs in the following sequence- loader valve, standard auxiliary valve. Reset or replace any relief below 2200psi. The flow should be no less than 25 gpm. If pump output is 20% less than rated pump specification, the pump may require repair. Consult loader service manual.</td>
</tr>
<tr>
<td>Tilt function is jumpy and erratic.</td>
<td>Tilt clamp bolts set too tight or rusted plate.</td>
<td>Loosen tilt clamp bolts to provide .015 clearance or grease between plates.</td>
</tr>
<tr>
<td>Planer drive motor leaks at shaft seal</td>
<td>Excess motor case drain pressure</td>
<td>The maximum case drain pressure allowed is 25 psi at full engine throttle. Replace shaft seal.</td>
</tr>
<tr>
<td>No functions work</td>
<td>No power to controller</td>
<td>Check fuse and power lead connections.</td>
</tr>
<tr>
<td>One function doesn't work</td>
<td>Check power to coil</td>
<td>If coil has power and pulls, cartridge is defective; replace cartridge. If coil doesn't pull, check for power to coil or replace coil.</td>
</tr>
<tr>
<td>Bearing failure of motor or output bearing.</td>
<td>Improper lubrication of bearing. Pick holder replacement-welder not grounded through drum.</td>
<td>Re-grease outboard bearing each 4-8 hours. During holder replacement, ground welder directly to drum (see Maintenance section).</td>
</tr>

FITTING TORQUE CHART

Always tighten fittings to these values unless a different torque value is listed for a specific service procedure.

Make sure fastener threads are clean and threads are engaged properly.

All torque values are adopted from SAE J514 and SAE J1453.

26 Appendix

Fitting Torque Chart
BOLT TORQUE CHART

Always tighten hardware to these values unless a different torque value or tightening procedure is listed for a specific application.

Fasteners must always be replaced with the same grade as specified in the manual parts list.

Always use the proper tool for tightening hardware: SAE for SAE hardware and Metric for metric hardware.

Make sure fastener threads are clean and you start thread engagement properly.

All torque values are given to specifications used on hardware defined by SAE J1701 MAR 99 & J1701M JUL 96.

WARRANTY

(Replacement Parts For All Models Except Mow’n Machine™
Zero-Turn Mowers and Woods Boundary™ Utility Vehicles)

Woods Equipment Company (“WOODS”) warrants this product to be free from defect in material and workmanship for a period of ninety (90) days from the date of delivery of the product to the original purchaser with the exception of V-belts, which will be free of defect in material and workmanship for a period of 12 months.

Under no circumstances will this Warranty apply in the event that the product, in the good faith opinion of WOODS, has been subjected to improper operation, improper maintenance, misuse, or an accident. This Warranty does not cover normal wear or tear, or normal maintenance items.

This Warranty is extended solely to the original purchaser of the product. Should the original purchaser sell or otherwise transfer this product to a third party, this Warranty does not transfer to the third party purchaser in any way. There are no third party beneficiaries of this Warranty.

WOODS’ obligation under this Warranty is limited to, at WOODS’ option, the repair or replacement, free of charge, of the product if WOODS, in its sole discretion, deems it to be defective or in noncompliance with this Warranty. The product must be returned to WOODS with proof of purchase within thirty (30) days after such defect or noncompliance is discovered or should have been discovered, routed through the dealer and distributor from whom the purchase was made, transportation charges prepaid. WOODS shall complete such repair or replacement within a reasonable time after WOODS receives the product. THERE ARE NO OTHER REMEDIES UNDER THIS WARRANTY. THE REMEDY OF REPAIR OR REPLACEMENT IS THE SOLE AND EXCLUSIVE REMEDY UNDER THIS WARRANTY.

THERE ARE NO WARRANTIES WHICH EXTEND BEYOND THE DESCRIPTION ON THE FACE OF THIS WARRANTY. WOODS MAKES NO OTHER WARRANTY, EXPRESS OR IMPLIED, AND WOODS SPECIFICALLY DISCLAIMS ANY IMPLIED WARRANTY OF MERCHANTABILITY AND/OR ANY IMPLIED WARRANTY OF FITNESS FOR A PARTICULAR PURPOSE.

WOODS shall not be liable for any incidental or consequential losses, damages or expenses, arising directly or indirectly from the product, whether such claim is based upon breach of contract, breach of warranty, negligence, strict liability in tort or any other legal theory. Without limiting the generality of the foregoing, WOODS specifically disclaims any damages relating to (i) lost profits, business, revenues or goodwill; (ii) loss of crops; (iii) loss because of delay in harvesting; (iv) any expense or loss incurred for labor, supplies, substitute machinery or rental; or (v) any other type of damage to property or economic loss.

This Warranty is subject to any existing conditions of supply which may directly affect WOODS’ ability to obtain materials or manufacture replacement parts.

No agent, representative, dealer, distributor, service person, salesperson, or employee of any company, including without limitation, WOODS, its authorized dealers, distributors, and service centers, is authorized to alter, modify, or enlarge this Warranty.

Date of Purchase: _____________________________ From (Dealer): _____________________________

Model Number: _____________________________ Serial Number: _____________________________

Woods Equipment Company (“WOODS”) warrants this product to be free from defects in material and workmanship. Except as otherwise set forth below, the duration of this Warranty shall be twelve (12) months commencing on the in-service date of the product or fifteen months after shipment from the factory or 2,000 hours of service, whichever occurs first. Proof of the in-service date must be provided for claims involving product that originally shipped more than twelve (12) months prior to the date of the claim.

Under no circumstances will this Warranty apply in the event that the product, in the good faith opinion of WOODS, has been subjected to improper operation, improper maintenance, misuse, inappropriate application or an accident. This Warranty does not apply in the event that the product has been materially modified or repaired by someone other than WOODS, a WOODS authorized dealer or distributor, and/or a WOODS authorized service center. This Warranty does not cover normal wear and tear, or normal maintenance items, as more specifically described below. This Warranty also does not cover repairs made with parts other than those obtained through WOODS.

This Warranty is extended solely to the original purchaser of new and unused product, including, but not limited to, purchases made from authorized WOODS dealers. Should such original purchaser sell or otherwise transfer this product to a third party, this Warranty does not transfer to the third party purchaser in any way. There are no third party beneficiaries of this Warranty.

WOODS’ obligation under this Warranty is limited to, at WOODS’ option, the repair or replacement, free of charge, of the product if WOODS, in its sole discretion, deems it to be defective or in noncompliance with this Warranty. The product must be returned to WOODS with proof of purchase within thirty (30) days after such defect or noncompliance is discovered or should have been discovered, routed through the dealer and distributor from whom the purchase was made, transportation charges prepaid. WOODS shall complete such repair or replacement within a reasonable time after WOODS receives the product. THERE ARE NO OTHER REMEDIES UNDER THIS WARRANTY. THE REMEDY OF REPAIR OR REPLACEMENT IS THE SOLE AND EXCLUSIVE REMEDY UNDER THIS WARRANTY. THERE ARE NO WARRANTIES, WHICH EXTEND BEYOND THE DESCRIPTION ON THE FACE OF THIS WARRANTY. WOODS MAKES NO OTHER WARRANTY, EXPRESS OR IMPLIED, AND WOODS SPECIFICALLY DISCLAIMS ANY IMPLIED WARRANTY OF MERCHANTABILITY AND/OR ANY IMPLIED WARRANTY OF FITNESS FOR A PARTICULAR PURPOSE.

WOODS shall not be liable for any incidental or consequential losses, damages or expenses, arising directly or indirectly from the product, whether such claim is based upon breach of contract, breach of warranty, negligence, strict liability in tort or any other legal theory. Without limiting the generality of the foregoing, WOODS specifically disclaims any damages relating to (i) lost profits, business, revenue or goodwill; (ii) any expense or loss incurred for labor, supplies, substitute machinery or rental; or (iii) any other type of damage to property or economic loss.

This Warranty is subject to any existing conditions of supply, which may directly affect WOODS’ ability to obtain materials or manufacturer replacement parts.

No agent, representative, dealer, distributor, serviceperson, or employee of any company, including without limitation, WOODS, its authorized dealers, distributors, and service centers, is authorized to alter, modify or enlarge this Warranty.

Contact an authorized WOODS dealer or service center for warranty service. Common issues that would NOT be covered by this Warranty Policy include, but are not limited to, the examples listed below this Policy.

Examples of Common, Non-Covered Claims

1. The owner and operator are responsible for maintaining weld integrity on attachments subject to weld erosion from ongoing contact with soils, rocks, and other materials. Different materials have differing abrasive characteristics that will erode the structural welds of ground-engaging attachments at differing rates. Structural failures may occur as a result of excessive weld erosion. The owner and operator are responsible for maintaining necessary weld sizes and re-welding eroded welds with industry-approved procedures. Woods will not accept warranty claims for weld erosion or structural failures of the attachment as a result of weld erosion.

2. Attachments are used extensively in ground-engaging operations and, as a result, the teeth, tooth holders, cutting edges, bucket edges, ripper shanks, and other portions of the attachment are subject to abrasion and resulting wear. Woods will not accept warranty claims for wear of components or wear of areas of the attachment subject to ground-engaging wear.

3. The owner and operator are responsible for examining the attachment for any weld or structural cracking. Any such cracking caused by a defect in materials or workmanship by Woods will be covered under the Woods Warranty Policy. If the owner or operator continues to operate the attachment after weld cracking or structural cracking is visible or should have reasonably been visible, and as a result of continued operation, additional damage to the attachment results, Woods will not accept responsibility for the additional damage caused to other welds or to the attachment structure.

4. Materially modifying Woods attachments may result in premature failures of the attachment. Woods will not accept warranty claims on attachments that have been materially modified.

5. Misapplications of attachments may result in premature wear, breakage, or structural failures of the attachment. Woods will not accept warranty claims on attachments that have been misapplied. For instance, using a general purpose excavator bucket in an application requiring a heavy or severe duty bucket or using the excavator bucket as a “jack hammer” to break concrete are considered misapplications.
